

TEA TOAST CAFE

Product Requirements Document (PRD)

Project: Premium Interactive Cafe Website & Digital Ordering Experience

Document Version: 1.0 **Status:** Product Definition

1. Executive Summary

Tea Toast Cafe is a modern digital experience for a tea-and-toast cafe that combines brand storytelling, interactive food discovery, online ordering, reservations, loyalty, events, and optional AI-powered recommendations. The website should feel like an extension of the physical cafe rather than a conventional restaurant template.

2. Product Vision

Vision: Make every digital interaction feel like entering the cafe—warm, playful, cinematic, and easy to use.

Core idea: Sip. Toast. Talk. Repeat.

3. Goals & Objectives

Goal	Description
Brand	Build a distinctive premium cafe identity and memorable digital presence.
Discovery	Help customers quickly explore tea, toast, snacks, desserts, and combos.
Conversion	Drive online orders, reservations, repeat visits, and event registrations.
Experience	Use tasteful animation, interaction, and storytelling to differentiate the brand.
Retention	Introduce loyalty points, rewards, and a Tea Passport.
Innovation	Optionally add AI recommendations and voice ordering as advanced features.

4. Target Users

- Students and young professionals looking for affordable food, Wi-Fi, and a comfortable place to work.
- Friends and families looking for casual food and social experiences.
- Cafe regulars who want faster ordering and loyalty rewards.
- New customers discovering the cafe through search, social media, or shared links.
- Event attendees looking for open mics, games, live music, quizzes, or community events.

5. Information Architecture

Home → Menu → Order → Experience → Rewards → Reservations → About → Contact

6. Core Functional Requirements

6.1 Homepage

- Hero section with logo, tagline, visual/video, opening status, and primary CTAs.

- Featured items and signature specials.
- Cafe story and atmosphere section.
- Experience categories: Morning Chai, Work & Study, Family Time, Friends, Late Night.
- Prominent order and visit CTAs.

6.2 Interactive Menu

- Categories: Tea, Toast, Snacks, Desserts, Combos.
- Search/filter and category navigation.
- Item detail cards with image, description, ingredients, price, dietary information, and add-to-cart action.
- Popular/signature badges.

6.3 Build Your Chai

- Choose tea base, flavor, sweetness, size, and optional add-ons.
- Real-time price calculation.
- Live summary and add-to-cart.
- Validation for incompatible options.

6.4 Online Ordering

- Cart management, quantity updates, item customization, pickup/delivery selection.
- Checkout with customer details.
- Payment integration using Razorpay or another supported provider.
- Order confirmation and order status tracking.

6.5 Reservations

- Date, time, party size, and table selection.
- Interactive table availability layout.
- Reservation confirmation and cancellation rules.

6.6 Cafe Experience

- Photo/video gallery with lightbox.
- Optional interactive 3D cafe walkthrough.
- Storytelling section showing how tea and toast are prepared.
- Study/work zone information.

6.7 Rewards

- Customer account and Tea Points balance.
- Reward redemption.
- Tea Passport for trying different menu items.
- Optional birthday or milestone rewards.

6.8 Events

- Event listings with date, time, description, capacity, and registration.
- Event detail pages and reservation CTA.
- Optional attendee confirmation.

6.9 AI Features

- Mood-based tea recommendation.
- Ingredient/preferences-based recommendation.
- Optional voice ordering that converts natural language into a cart for confirmation.

6.10 Contact & Location

- Address, opening hours, phone, social links, parking information, and map.
- Directions CTA and contact form.

7. User Flows

Ordering: Home/Menu → Select Item → Customize → Add to Cart → Checkout → Payment → Confirmation → Tracking

Reservation: Reservations → Date/Time → Party Size → Select Table → Confirm → Confirmation

Rewards: Sign In → View Points → Browse Rewards → Redeem → Updated Balance

AI Recommendation: Mood/Preference → Recommendation → View Item → Customize → Add to Cart

8. UI/UX Requirements

The visual language should feel warm, premium, contemporary, and distinctly Indian without becoming visually cluttered.

- Suggested palette: Cream #F7F1E5, Deep Chai Green #173F35, Toast Orange #C46A32, Golden Tea #E4B363, Dark Brown #241C18.
- Typography: Instrument Serif or Playfair Display for display headings; Inter or Manrope for interface text.
- Responsive design across mobile, tablet, laptop, and large desktop.
- Accessibility: semantic HTML, keyboard navigation, visible focus states, adequate contrast, alt text, and reduced-motion support.
- Animation should reinforce hierarchy and storytelling rather than slow down ordering.

9. Motion & Interaction Direction

Recommended animation stack: GSAP + Lenis, with Three.js/React Three Fiber reserved for selected hero or immersive sections.

- Scroll-triggered tea pouring/steam effects.
- Toast reveal and product transitions.
- Smooth category transitions in the menu.
- Micro-interactions for buttons, cart, rewards, and reservation selection.
- Respect prefers-reduced-motion and keep core functionality usable without animation.

10. Recommended Technology Stack

Layer	Technology
Frontend	React + Tailwind CSS
Animation	GSAP + Lenis
3D	Three.js / React Three Fiber
Backend	Next.js API Routes
Database	Supabase
Authentication	Supabase Auth
Payments	Razorpay
AI	Gemini API
Maps	Google Maps

Deployment	Vercel or Netlify
------------	-------------------

11. Backend & Data Model

Suggested core entities:

- Users — profile, contact details, authentication metadata.
- Menuitems — name, category, description, price, image, ingredients, dietary flags, availability.
- Orders — customer, items, subtotal, tax, total, payment status, fulfillment type, order status.
- Reservations — customer, date, time, party size, table, status.
- Rewards — user, points balance, transactions, redemption history.
- Events — title, description, date, time, capacity, registrations.
- Reviews — customer, rating, text, date, moderation status.

12. Admin Dashboard

The cafe team should be able to manage the operational content without editing code.

- Add/edit/remove menu items.
- Mark items available/unavailable.
- View and update orders.
- Manage reservations and tables.
- Create and manage events.
- Manage offers/rewards.
- Review basic sales and customer analytics.

13. Non-Functional Requirements

- Fast initial load and optimized images/video.
- Mobile-first responsive implementation.
- Secure server-side payment verification and protected API routes.
- Database access through authenticated, least-privilege policies.
- SEO-friendly metadata, structured content, sitemap, and local business information.
- Analytics for menu views, add-to-cart, checkout, orders, reservations, and reward engagement.

14. MVP Scope

For the first production-ready version, prioritize:

1. Premium homepage
2. Complete interactive menu
3. Cart and online ordering
4. Basic checkout/payment
5. Reservations
6. Cafe location/contact
7. Admin menu/order management

15. Phase 2 / Differentiation Features

Build Your Chai, loyalty points, Tea Passport, events, richer analytics, AI recommendations, and richer motion/3D experiences.

16. Success Metrics

Metric	Purpose
Menu engagement	Measure whether users explore products.
Add-to-cart rate	Measure product-to-order intent.
Checkout completion	Identify payment/order friction.
Reservation conversion	Measure cafe visit intent.
Repeat customer rate	Measure loyalty effectiveness.
Reward redemption	Measure engagement with the loyalty system.
Page performance	Maintain a fast, reliable experience despite animation.

17. Final Product Direction

The final product should sit between a premium cafe website and a lightweight digital cafe platform. The experience should be visually distinctive enough for a design portfolio while keeping ordering, reservations, and everyday customer tasks simple and fast.

Prepared as a product blueprint for Tea Toast Cafe.
